Work Experience

Identomat   Tbilisi, Georgia
Frontend developer   *March 2023 - Present*

- Developed a custom company UI library with 30 reusable, independent components, complete with thorough documentation, parameter mocks, and test coverage to ensure reliability and maintainability. (30 and still growing)

- Build complex, dynamic client-side applications within a microfrontend architecture, implementing intricate UI logic and reusable modules to enhance maintainability and scalability.

- Developing and optimizing server-side applications in PHP and Node.js, creating independent backend modules that interact seamlessly with MongoDB for efficient data manipulation.

- Refactoring and modernizing legacy code, converting existing frontend modules into a modern component-based architecture and migrating backend logic to Node.js, while ensuring test coverage and comprehensive documentation.

- Transforming a full web application into a modern Single Page Application (SPA), redesigning styles and improving maintainability, scalability, and user experience.

- Enhancing accessibility, performance, and cross-browser compatibility across the entire project by conducting thorough testing with DevTools and optimizing key areas.

- Actively collaborating with cross-functional teams, including Product Managers, UI/UX Designers, and Software Engineers, contributing ideas and improvements beyond assigned tasks.

- Independently testing and optimizing deployments by verifying functionality on various devices, including old Android and iOS models, ensuring smooth performance across different environments.

- Providing valuable input on project goals and user experience, proactively suggesting improvements to PMs, POs, and designers to enhance the application's design, usability, and smoothness.

Bitoid   Tbilisi, Georgia
Frontend Developer   *October 2022 - March 2023*

- Developed and delivered multiple frontend projects, implementing scalable UI solutions using React and styled-components.

- Received detailed code reviews from senior developers, improving best practices in performance, maintainability, and clean architecture.

- Built responsive and accessible user interfaces, strengthening expertise in component-based architecture and state management.

- Engaged in a highly collaborative environment, working on real-world challenges and refining problem-solving skills through hands-on development.

- Gained hands-on experience with version control systems, primarily Git, to manage code and collaborate effectively within a development team.

Skills

Languages

- English
- Russian

Tech Stack

Frontend

- JavaScript, TypeScript
- React, Next.js, Svelte
- Tailwind, MUI, Bootstrap, Styled-components, SASS/SCSS

Backend

- Node.js, Express, PHP

Databases & Tools

- MongoDB, Mongoose
- Micro Frontends
- Cypress, Mocha, Chai
